

# Time to Repair or Replace Your Heat Pump?

## 6 Symptoms That Will Help You Decide

Improper heating during the cold months can lead to higher utility bills, frozen or burst pipes, and other costly issues. Simple maintenance/repair is often the solution, but sometimes your system may need replacement.

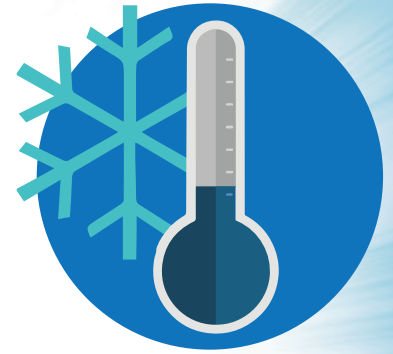

Here are six common home heating symptoms from IT Landes to help you decide if it's time to act:

1. Vents blowing cold air in heat mode

2. Increasing utility bills

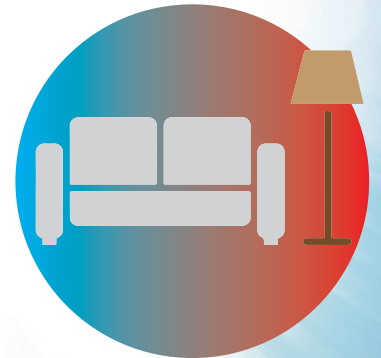

3. Temperature that is inconsistent with thermostat setting

4. Strange or musty odors

5. Loud noises, rattling, or shaking

6. Inconsistent room temperatures (some warmer or cooler than others)

### What are some common causes?

- Lack of maintenance
- Mechanical wear and tear
- Dirty or clogged filter and/or coil
- Faulty thermostat
- Duct leakage
- Poor insulation
- Improper refrigerant charge
- Outdated system

### Unsure why your heat pump is having problems? IT Landes can help:
